Ultimately, final medical decisions are made by your respective healthcare provider.

PULMONOLOGY AND ITS DISEASE CHARACTERISTICS

Pulmonology is one of the most intense and complicated branches of internal medicine. Likewise, Pulmonary diseases display high degree of genetic heterogeneity with substantial phenotypic overlap. This is attributed to the greater number of genes and mutations fundamental to the hereditary pulmonary diseases. Next Generation Sequencing Molecular based clinical diagnosis with multi-gene target panel specific to various hereditary pulmonary diseases is often the best and affordable primary option.

WHY PULMONARY MOLECULAR TEST?

There is a plethora of pulmonary diseases predisposed in the genomes of carrier children in the form of mutations. They go unnoticed until the actual disease manifests its phenotype. Hence, identifying at-risk family members paves the way to begin preventive treatments and/or for making lifestyle recommendations. This is can be possible only through genetic diagnostics. It also justifies routine follow-ups by health care professionals and helps in family planning.

WHY GENESIS DIAGNOSTICS PULMONARY MOLECULAR PANEL?

Genesis Diagnostics came up with the gene panel specific to pulmonary diseases. It covers all of the hereditary pulmonary diseases. It has been carefully selected based on scientific literature, mutation databases and our experience.

‘One size doesn’t fit all’ - Genesis Diagnostics is the only entity that provides customized Molecular reports for a facile clinical interpretation.

"Large Enough to Serve You, Small Enough to Know You"

Genesis Diagnostics® is a full service, national diagnostic testing laboratory headquartered in Langhorne, Pennsylvania with concentrations in clinical diagnostics, pathology, toxicology, genetic sequencing and molecular testing. Genesis Diagnostics is devoted to redefining diagnostic services by providing medical practitioners and their patients with exceptional customer service paired with the most advanced and informative medical analytics to assist them in making effective treatment decisions.

Genesis Diagnostics' fully automated laboratory utilizes state-of-the-art technologies to deliver high quality test results and service while exceeding the turnaround time requirements and demands of our physician clients. Genesis Diagnostics currently analyzes samples for hundreds of thousands of patients per year from providers and healthcare facilities all across the nation.

As our clients have trusted our laboratory with being an analytical and integral part of their patients' diagnosis and treatment process, we believe in respecting that trust with continuous dedication to customer satisfaction and support. We join our clients and physicians in their belief that patient care is and always will be the number one priority. Genesis's personalized support and professional service continues to exceed the expectations of our valued clients, providers and facilities. More healthcare facilities and providers, in private practices, in hospitals and in long term care facilities, are placing their trust in Genesis Diagnostics; and, together we are transforming advanced diagnostic information into knowledge and superior treatment options for more and more patients every day.

Genesis Diagnostic is accredited in all 50 states of U.S. with national and regional insurance contracts.

We offer accurate laboratory services and unparalleled support. At Genesis Diagnostics Laboratory, we process thousands of laboratory specimens a week — providing confidence to our valuable clients nationwide.
